DETAILED ACTION

1. Claims 1-9, 11, 12, 14, 16-28, and 30-34 are pending and have been examined. Claims 12 and 19 are independent. Claims 1-9, 12, 14, 16-18, 28, 30, 31, 33, and 34 are amended.

Response to Arguments

2. Applicant's arguments filed 04/10/2008 with respect to claims 12 and 19 have been fully considered and are persuasive. The Non-Final Rejection of 02/05/2008 has been withdrawn.

Allowable Subject Matter

3. **Claims 1-9, 11, 12, 14, 16-28, and 30-34** are allowed.

The following is an Examiner's Statement of Reasons for Allowance:

The present invention relates to a memory agent and a method that selectively map first lanes to second lanes. The memory agent transfer training and return sequences using different lane mappings.

The claimed invention as set forth in **claim 12** (broadest claim) recites features such as:

A memory agent comprising:

a first receive link interface having a plurality of first receive lanes; and

a first transmit link interface having a plurality of first transmit lanes;

wherein the memory agent
receives a plurality of training sequences having different mapping indicators on
the plurality of first receive lanes during a testing operation;
transmits a plurality of return sequences on the plurality of first transmit lanes
wherein each of the plurality of return sequences is responsive to a corresponding one
of the plurality of training sequences according to a corresponding one of a plurality of
mappings during the testing operation; and
analyzes the return sequences based on the plurality of mappings to identify
failed lanes in the plurality of first receive lanes and the plurality of first transmit
lanes.

The prior arts of record teach that any mappings can be used, only one
reordering is used, and it is used to correct lane orders *after* a testing operation and
analysis, not *during the* testing operation; **Bunton et al.** (US-6961347) is one example
of such prior arts.

The prior arts of record, however, fail to teach, singly or in combination,
transmitting training and return sequences according to first and second mappings
during a single testing operation, and analyzing the return sequences based on the
multiple mapping. As such, modification of the prior art of record to include the claimed
transmitting training and return sequences according to first and second mappings
during a single testing operation, and analyzing the return sequences based on the
multiple mapping can only be motivated by hindsight reasoning, or by changing the

intended use and function of the prior art themselves. Therefore, it is not clear that one of ordinary skill in the art at the time of the invention would have made the necessary modifications to the prior art of record to encompass the transmitting training and return sequences according to first and second mappings *during* a single testing operation, and analyzing the return sequences based on the multiple mapping set forth in the present application. Moreover, none of the prior arts of record, taken either alone or in combination, anticipate nor render obvious the transmitting training and return sequences according to first and second mappings *during* a single testing operation, and analyzing the return sequences based on the multiple mapping as set forth in **claim 12**. Independent **claim 19** recites similar patentable features and is allowable for the same reasons as **claim 12**. Hence, **claims 1-9, 11, 12, 14, 16-28, and 30-34** are allowable over the prior arts of record.

The Examiner agrees with the Applicant's arguments with regard to this feature in view of the arts of record; therefore, the Examiner favors the allowance of **claims 1-9, 11, 12, 14, 16-28, and 30-34**. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
